Dear Recruiter,

'To think along with clients and sell' is an important skill for a software engineer. I have gained a deep understanding of client requirements working as a software developer at Walmart. I have implemented Spring Boot microservices in an agile development methodology and worked in a CICD (Continuous integration and continuous delivery) environment. Through my work experience, I have learned to build scalable and reusable software efficiently. I have a huge passion for problem-solving and have been thrilled to solve complex engineering problems for over 5000 Walmart US pharmacies. Over the 2 years of my experience as a backend developer, I have developed clean, well-documented, and easy-to-use APIs using Java and SQL. Prior to this, I have worked with an AIML startup called Optimum Data Analytics, which sponsored my year-long thesis project in NLP. I have completed multiple NLP projects and worked extensively on deep learning (NLP) models like LSTMs, and BERT. I have also completed a software development internship at Walmart where I worked on an individual data science project.

Strong verbal and written communication skills go a long way in achieving software development milestones. Having delivered a seminar to the entire college, writing and presenting projects during my undergraduate course instilled solid verbal and written communication skills in me. My open-source contributions have made me realize I thrive on team-oriented as well as individual contributions. **Accountability Counsel's** culture of collaboration and growth has got me more excited about the role.

I have a strong technical and quantitative aptitude. I am a hardworking individual and a great team player. Always keen to learn new things and take on new challenges. I truly believe that given my previous experience and skills I will be able to make great contributions as a Software Engineering Intern at **Accountability Counsel**. I have attached my resume for more details about my academic and professional journeys. I am really looking forward to further discussing my interest in this position.

Thank you in advance for taking the time to consider my application.

Sincerely,
Vaidehi Joshi
